

Box plot showing the distribution of plasma concentrations (ng/mL) for 10 subjects. The x-axis is logarithmic, ranging from 1e-01 to 1e+03 ng/mL. The y-axis represents individual subjects. The box plot shows a median around 0.2 ng/mL, with a range from approximately 0.1 to 0.3 ng/mL. There are several outliers, with one subject having a concentration near 0.3 ng/mL. Vertical red lines indicate the limits of quantification (LOQ) for each subject, ranging from approximately 0.5 to 1000 ng/mL.
